 Applicant's amendment filed on 07/27/10 has been entered and made of record.

 Applicant has amended claims 1-31. No claims have been added nor canceled. Currently, claims 1-31 are pending. Examiner refers to the action below.

Allowable Subject Matter

- 3. Claims 1-31 are allowed.
- 4. The following is an examiner's statement of reasons for allowance: The closest prior art of Willams et al. (U.S. patent 6,831,996 B1) discloses to inspect a wheel based on the stored model(s) of the wheels in a memory. Regarding claim 1, Williams et al. does not teach the feature of "fitting, by the computer, of the picture of the model body resulting from the model parameters to the picture of the rim geometry detail through changing the model parameters of the model, and tracking, by the computer, the changes of the model parameters of the model upon the fitting, wherein the data related to the position of the model body of the wheel rim geometry detail reflect the spatial position of the wheel rim geometry detail and, thereby, of the wheel rim itself, when the image resulting from the model parameters of the model body of the wheel rim geometry detail matches to the captured picture of the wheel rim geometry detail within the asserted tolerance limits." These, in combination with the other claim limitations. Regarding claim 19, Williams et al. does not teach the feature of "said measuring"

unit further comprises computer means configured to making available of a model that describes a model body of a localizable wheel rim geometry detail as well as the spatial position of the model body to the measuring device through model parameters, and further configured to fitting of the picture of the model body resulting from the model parameters to the picture of the rim geometry detail through changing the model parameters of the model, and tracking the changes of the model parameters of the model upon the fitting, wherein the data related to the position of the model body of the wheel rim geometry detail reflect the spatial position of the wheel rim geometry detail and, thereby, of the wheel rim itself, when the image resulting from the model parameters of the model body of the wheel rim geometry detail matches to the captured picture of the wheel rim geometry detail within the asserted tolerance limits." These, in combination with the other claim limitations. Regarding claim 24, Williams et al. does not teach the feature of "fitting, by the computer, of the picture of the model body resulting from the model parameters to the picture of the rim geometry detail through changing the model parameters of the model, and tracking, by the computer, the changes of the model parameters of the model upon the fitting, wherein the data related to the position of the model body of the wheel rim geometry detail reflect the spatial position of the wheel rim geometry detail and, thereby, of the wheel rim itself, when the image resulting from the model parameters of the model body of the wheel rim geometry detail matches to the captured picture of the wheel rim geometry detail within the asserted tolerance

limits, and determining the relative positions of the measuring units for execution of the measurements, and expressing the measuring results of the measurements on the wheels of the motor vehicle in terms of wheel position values taking into account the relative positions of the measuring units." These, in combination with the other claim limitations. Regarding claim 28, Williams et al. does not teach the feature of "said system further comprising computer means configured to making available of a model that describes a model body of a localizable wheel rim geometry detail as well as the spatial position of the model body to the measuring device through model parameters, and further configured to fitting of the picture of the model body resulting from the model parameters to the picture of the rim geometry detail through changing the model parameters of the model, and tracking the changes of the model parameters of the model upon the fitting, wherein the data related to the position of the model body of the wheel rim geometry detail reflect the spatial position of the wheel rim geometry detail and, thereby, of the wheel rim itself, when the image resulting from the model parameters of the model body of the wheel rim geometry detail matches to the captured picture of the wheel rim geometry detail within the asserted tolerance limits." These, in combination with the other claim limitations.

.5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
